

Defender for Endpoint

Endpoint events from:

- Threat & Vulnerability Sensor
- Attack Surface Reduction
- Exploit Protection
- Hardware-based isolation
- Application Control
- Network Protection
- Firewall
- Browser Protection
- Next-Generation AV Protection
- EDR Behavioral Sensors
- Update Service

Microsoft Defender for Endpoint behaviors & events are being collected and surfaced into a single console.

All these behaviors & events are used for:

- Visibility & Reporting
- Investigation, Hunting
- Automated investigation & response
- Detections, Event correlation
- Threat & Vulnerability Management
- Signal Exchange
- Security Analytics
